

Make My Decision!

Choose an Activity

Student Name: Siobhan Roche

Student ID: W12344454

Date: 29/09/2026

1. My Idea

What will my program do?

My program will help the user decide what activity they could do today.

It will ask the user about the weather, how much money they want to spend, how much time they have available, whether they want to be indoors or outdoors, and whether they want to do something active.

The program will use their answers to recommend a suitable activity.

What information will I ask the user for?

Information	Variable Name	Data Type	Example
Name	name	str	Sarah
Age	age	int	20
Budget	budget	float	25.00
Weather	weather	str	sunny
Hours available	hours	int	3
Indoor or outdoor	location	str	outdoor
Wants an active activity	active	bool	True

2. Rules

Rule 1

IF the user wants to be outdoors AND the weather is sunny AND they have at least 2 hours available

THEN recommend going for a hike.

Rule 2

IF the user wants to be outdoors AND the weather is sunny AND they have less than 2 hours available

THEN recommend going for a walk.

Rule 3

IF the weather is rainy AND the user wants to be indoors AND their budget is at least €15

THEN recommend going to the cinema.

Rule 4

IF the user wants to be indoors AND wants something active

THEN recommend going swimming.

Rule 5

IF the user's budget is less than €15 AND they want to be indoors

THEN recommend watching a film at home.

Additional Rule

IF the user wants to be outdoors AND the weather is rainy

THEN recommend an indoor activity instead.

3. Testing My Idea

I will test different combinations of answers to make sure that my rules produce the results I expect.

Test	Weather	Budget	Hours	Location	Active	Expected Result
1	sunny	€30	4	outdoor	yes	Hike
2	sunny	€5	1	outdoor	no	Walk
3	rainy	€20	3	indoor	no	Cinema
4	sunny	€20	2	indoor	yes	Swimming
5	rainy	€5	3	indoor	no	Film at home
6	rainy	€30	4	outdoor	yes	Choose an indoor activity

Boundary Tests

Rule 1 and Rule 2 : 2 hours Test

So I should test around this boundary.

Hours	Expected Behaviour
1	Less than 2 hours
2	At least 2 hours
3	At least 2 hours

Rule 3 and Rule 5: Budget:

Budget Expected Behaviour

€14 Less than €15

€15 At least €15

€16 At least €15

Before I Start Coding - Checklist

I know what my program is going to do.	Yes
I have chosen suitable data types.	Yes
My rules can produce different recommendations.	Yes
I have planned different test cases.	Yes
I have identified values at the boundaries of my rules.	Yes
